

Explicit Knowledge: Knowledge Management (KM) session

Topic: New Paradigm in Higher Education

Best practice: Dr. Eugenia A. Boa

May 16, 2018 at the 2nd floor Meeting Room NUIC

New Paradigm in Higher Education

The Knowledge Management on new paradigm in higher education was successfully completed. There were disturbing yet interesting highlights on the future of education.

The explicit knowledge are as follows:

- 1) Learning the current trends in higher education as well as the future direction of the higher education institutions.
- 2) The tools/techniques on how to deal with the changing landscape of higher education institutions, like using technology in teaching instead of using the traditional method of teaching.
- 3) The KM provides insights to all the lecturers that it is about time for them to rethink their important contribution in higher education institutions.
- 4) The HEIs is evolving and some authorities predicted that it will become obsolete and be gone in the future, however, it is believed that HEIs will remain but it will surely transform into something.
- 5) As a lecturer, this KM provided a mechanisms on how they can think on better ways to continuously improve HEIs.
